

Machine Tools

NEW TPH Dolfin -

Cad Cam Packages for Milling & Turning

Stock No. 6520004608N

**ONLY
£195!**

PartMaster

Level 1
Milling

The simplicity of CAD with the sophistication of CAM in a single product
Dolphin CAD/CAM announce a new concept in machining. Now for the first time you can design your product in CAD, then create a machining program and send it to your CNC machine tool from within the CAD system.

Simply draw the profile you wish to machine or import a DXF file

Ask the CAD system to produce a pocketing toolpath for instance, at the required Z depth, then simulate the toolpath

Select Post-process and choose your machine type

Use the built-in Rs232 Communication package to send the program to your machine tool's controller

The machine tool cuts the part

NO Separate machining system - NO Hassle

Machining operations

- Contouring with lead-in and lead-out options
- Simple Pocketing - Rectangular and Circular
- Advanced area clearance with unlimited islands
- Full Tool offsetting with Span Elimination
- Drilling cycles - Drill, Peck drill, Deep drill, Ream, Bore and Tap
- Engraving - True type fonts and simple "stroke" fonts
- Toolpath Simulation

PartMaster Level 1 is a specially developed version of PartMaster CAD. Machine tools that can be used include:- Milling and Drilling machines, Engraving machines, Routers, Laser and Plasma cutters.
